

The POHL logo is located in the top right corner of the image. It consists of the word "POHL" in a bold, white, sans-serif typeface. The background of the entire page is a photograph of a modern building's glass facade, featuring a complex geometric pattern of dark frames and large glass panels that reflect the sky and surrounding environment. A semi-transparent, light-colored rectangular block is positioned in the lower-left quadrant, partially overlapping the glass facade and the dark footer area.

Duranize Bicolor Finishes for Aluminum Cladding

 THE STATEMENT OF YOUR BUILDING

Exclusive metal panel solutions for outstanding architecture.

POHL specializes in engineering and fabrication of bespoke metal panel solutions, offering a wide range of materials and surfaces for striking exterior and interior cladding. Regardless of shape, color, or material, we embrace every challenge to transform architectural visions into **THE STATEMENT OF YOUR BUILDING.**

POHL Duranize Bicolor

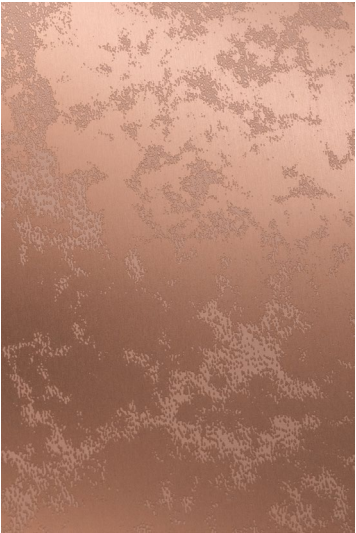

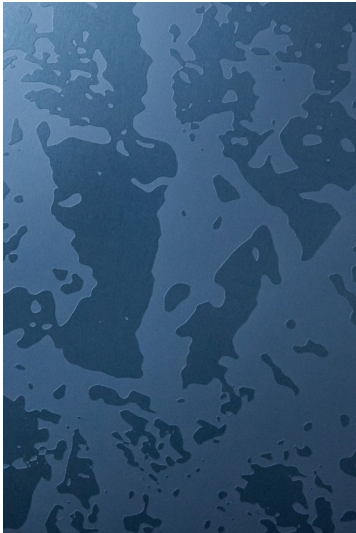

A unique signature for every building

POHL Duranize Bicolor is a finishing technique that combines two or more anodized layers to create custom facades and surfaces with a wide range of visual effects. From flowing color gradients and precise geometric patterns to subtle textures, complex motifs, and logos, it offers extensive design flexibility for both interior and exterior applications.

- Certified to Anodizing Class 1
- Excellent UV and scratch resistance
- Low-maintenance surface
- Long-lasting appearance
- 100% recyclable

Design Examples

The design possibilities are virtually limitless. Custom patterns, motifs, and gradients, coordinated color combinations, and the interplay of matte and glossy surfaces open up a wide range of possibilities for unique architectural designs.

Organic designs bring, for example, stone structures and the look of other natural materials to anodized aluminum, creating surfaces with authentic depth and a distinctive appearance.

With POHL Duranize Bicolor, corporate design can be seamlessly integrated into architecture. Logos and lettering can be

incorporated into the anodized surface as either large-scale individual motifs or repeating patterns.

Custom color combinations, along with matte and glossy finishes, reflect a brand's visual identity. The result is distinctive

surfaces for facades, interiors, flagship stores, showrooms, hotels, restaurants, reception areas, or corporate buildings.
